

# NUDURA Project Profile

## Eagle Rising - Colorado, USA

### FAST FACTS

- This project was ideal for NUDURA, due to the fact that the owner wanted an energy efficient house, as well as a quiet house in a very windy location. The combination of R-value, mass, and zero air infiltration maximize the energy efficiency, and the concrete structure stands up to the high winds structurally, as well as significantly reducing the noise.
- Engineer on the project: John Giltner, PE.
- 4,400 sq ft. with a combination stone stucco finish.

***“This project optimizes the use of NUDURA, while also pushing the limits of the product. Also, the owners absolutely love the house!”*** James R. Plagmann - AIA - Human Nature Architecture

### PROJECT STATISTICS

**Location:**

Colorado, USA

**Type:**

Residential

**Size:**

4,400 sq. ft.

### CONSTRUCTION TEAM

**General Contractor:**

Mike Pettigrew

**Architect:**

James R. Plagmann AIA.

Human Nature Architecture

**ICF System:**

NUDURA
