

WALSINGHAM ACADEMY

Panama City Beach, Florida

A. Gary Walsingham Academy in Panama City Beach, Florida exemplifies the effective use of Nudura ICFs (Insulated Concrete Forms) for the construction of educational facilities for increased durability and sustainability.

The academy, the first new school built in the area after Hurricane Michael, leverages the strength of ICF technology to withstand hurricane-force winds and pressures, ensuring the safety of its faculty and students. Additionally, the sound-dampening properties of ICF enhance the learning environment by reducing noise distractions.

The U-shaped, two-story design includes administrative offices, media centers, and classrooms. ICFs were used for the exterior walls and double-loaded corridors, providing the structural integrity and insulation needed to comply with Florida's stringent building codes.

Project Statistics

Location:	Panama City Beach, FL
Completion Date:	August 2022
ICF Installation Time:	190 days

Construction Team

Owner:	Lee Walters
General Contractor:	ReliantSouth Construction Group
ICF Installer:	PCS
